

Slug Stocks Nov 29th 2022

Due to stock and searches without an account being limited to 5 per minute, there is an error if these are exceeded.

This has been reduced as a problem by caching and saving some results to cookies so that saved values can be used again on reload. This would 100% be fixed by buying a premium key to get more stocks per minute/day or changing out the getNews() Function for a web scraped version.

If trying to spend more money than you have available, you will not error out, the order will just not go through and be rejected instantly (does not appear in orders because it is not active) could calculate if the order amount given is greater than spending power and prevent or throw error popup explaining.
