

Sprint 1 Report - SlugStocks - Slug Stocks,

Oct 18th 2022

- **Actions to stop doing:** the daily meetings might need to get changed to later due to them being somewhat early for people to show up reliably on time. The organization/scrum board is nice but we should stop laying out large tasks because they are daunting to approach. Instead looking to have smaller tasks that build to the larger goal/feature. Having more realistic goals for a sprint, estimated hours were lower than they should have been for learning the technologies

- **Actions to start doing:**

Group work sessions to sync up and get more work done so that we can help each other and get things done.

Have more specific/broken down tasks so people don't feel as daunted when facing some of the bigger problems by themselves

- **Actions to keep doing:** We want to keep communicating on discord as it keeps us all up to date with the things that are happening and what people are working on/doing. Using the miro board for tasks has also allowed for more independence in working and doing tasks.

- **Work completed**

User Authentication and Login with secured and hashed passwords

/not completed:

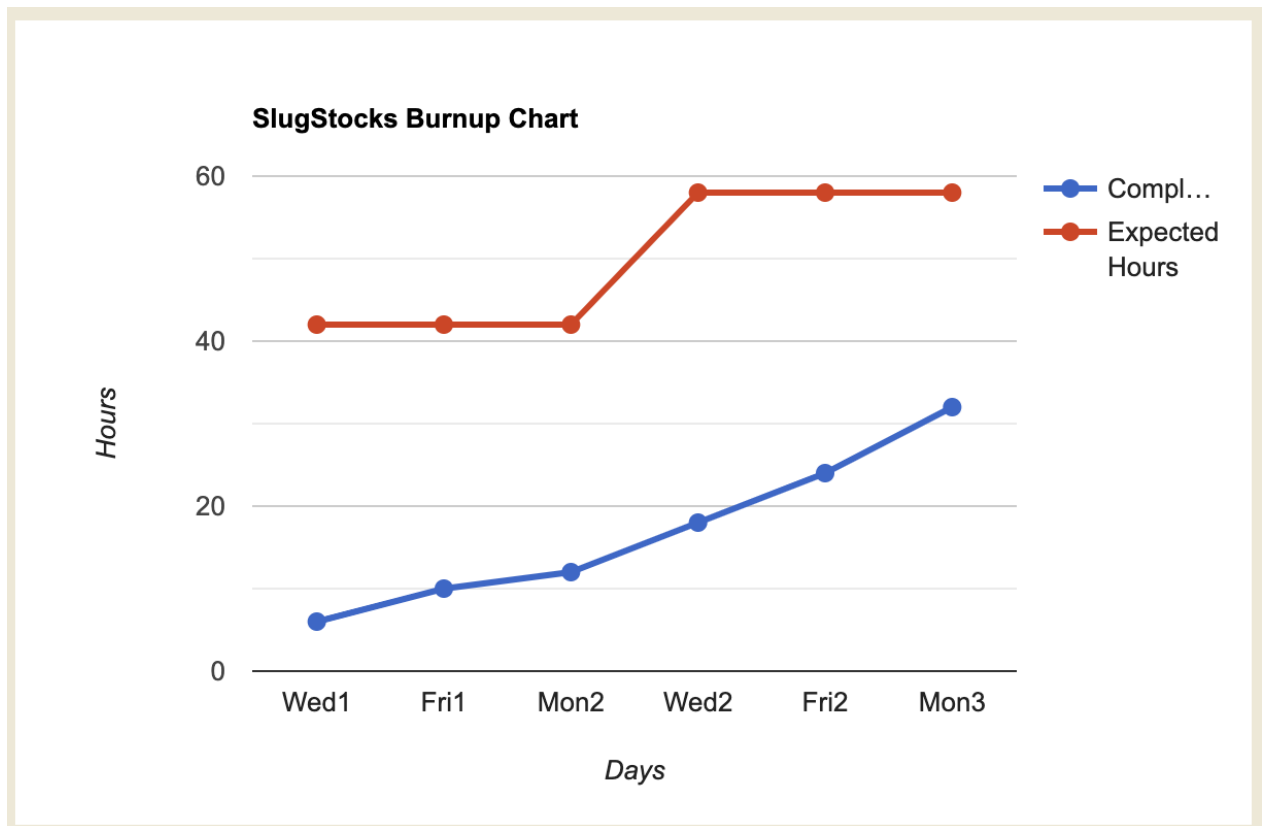

As a User I need to be able to add funds/connect account so that stocks can be traded

As a User I want to be able to buy and sell stocks so that the platform has a use.

- **Work completion rate:** Ideal work hours total:~60, Total number of days during the prior sprint: ~14. For the previous sprint, the user stories/day: ~1 and ideal work hours/day:

~4 per day. figures should be reported.

Estimations were fairly off, learning the new technologies took more time than expected and bank authentication tokens harder than expected. Goals for the sprint were ambitious given our experience.
